

ABSTRACT OF THE DISCLOSURE

EMITTER GEOLOCATION

A method and ~~means~~ system for correcting for refraction effects of the earth's atmosphere in an emitter geolocation technique for locating an emitter of electromagnetic waves, by ~~means~~ way of a plurality of receivers, ~~including~~ involves detecting the times of arrival of electromagnetic waves at the receivers, computing the relative time differences of arrival between the various receivers, and estimating therefrom the position of the emitter, ~~and for correcting, by means emitter.~~ By way of an iterative procedure, the detected times of arrival for path length discrepancies caused by refraction in the earth's atmosphere are corrected. The receivers are each mounted on a respective airborne platform, and at least three pairs of said those receivers are provided.
